**On the occasion of Teacher's day a message by
Honorable Prime Minister Shri.Narendrabhai Modi**

Sir.

5 th September 2016

Dr.Sarvepalli Radhakrishnan's birthday is celebrated on 5th September as Teachers' Day all across the country since 1962. Instead of celebrating his own birthday, the first Vice President of India and the second President of India requested everyone to celebrate his birthday as a day solely dedicated for the teachers and that would be the greatest birthday gift for him. Since then, we are celebrating Teachers' Day on 5th September. In most schools, Teachers' Day is usually celebrated by the students of college.

Our Honorable Prime Minister Shri.Narendrabhai Modi interacted with college students. To hear the lecture of Prime Minister Shri.Narendrabhai Modi Professor and administrative staff gathered in lecture hall no – 4

In his speech He also spoke about the importance of Teachers' Day and remembered Dr. Radhaskrishnan. He said that change in nation does not mean doing good things but at times small things can also be fruitful for the nation.He showed concern about the teaching profession and told the students the importance of teachers in their lives. He said that mothers give us birth but teachers give us life. A student is a representative of his teacher; he is a canvas painted by the teacher. He added that nation building should become a national movement and every Indian should be a part of it. He concluded his speech by saying that teacher-student relationship should be nurtured in a way that the child in an individual should stay alive. Everyone should always keep smiling and playing.

During the interaction televised live, Prime Minister Shri Narendra Modi talked about his childhood narrating anecdotes and pranks with an emphasis that children should not lose their childhood and should inculcate the habit of reading as well as cleanliness. During his speech and interaction with the students, he focused on many points. He answered the questions asked by the students and took active interest in their queries.
